

Food Stability indices – how can I measure Food Stability?

| Dimension | Indicator | Definition and source | Unit | Data source |
|------------------|---|--|-----------------|---|
| Stability | Cereal import dependency ratio | $(\text{cereal imports} - \text{cereal exports}) / (\text{cereal production} + \text{cereal imports} - \text{cereal exports}) * 100$ | % | <i>Food and Agriculture Organization of the United Nations. (1997).</i> |
| | Percentage of arable land equipped for irrigation | Ratio between arable land equipped for irrigation and total arable land | % | |
| | Per capita food supply variability | Per capita food supply variability corresponds to the variability of the "food supply in kcal/caput/day" | kcal/capita/day | http://www.fao.org/fao-stat/en/#data/FS |
